

FOLDING TEMPLATES

About the folding templates

- Absolute Colour Printing's Indesign folding templates contain a **'fold'**.
- The **'fold'** file has been set-up on the locked **"Template"** layer of the Indesign file.
- Place your PDF file on the **"File"** layer and create a new PDF file. The new file will include the **'fold'**.

Template Colour

- We have set all our **'fold'** lines in Pantone colour **'Process Blue'** and the swatch has been renamed **„fold"**.
- **PLEASE NOTE:** It is important that this remains unchanged.

About the 'fold' file

- The **'fold'** file on the **"Template"** layer is an indicator of where the job will fold. It will not print on your job.
- Please do not alter this file as it represents a pre-determined folded section.
- Only apply forme to the front artwork. If your artwork is double sided the back artwork (second page of the PDF) does not require the knife line.

Bleed

- Ensure that you have **3mm** (minimum) of bleed where any background colour/images extends past the trim edge.
